Visual

Text

```
alert('Your are nice from Code For BeforeBookingLoaded');
<?php
$user_input = "Your site rocks";
echo "<h4>My Commenting
System</h4>";
echo $user_input;
?>
```

On frontend:

The screenshot shows the Chrome DevTools Elements panel. The HTML structure is as follows:

```

<div class="am-wrap">...</div>
::after
</div>
<br>
"
[wpvue]"
<p></p>
<pre class="wp-block-code">...</pre>
<p></p>
<script type="text/javascript">
  function beforeBookingLoaded(){alert('Your are nice from Code For BeforeBookingLoaded');
    } function beforeConfirmBookingLoaded(){alert('Your are nice from Code For Code For BeforeConfirmBookingLoaded');} == $0
</script>
<div class="social">...</div>

```

The script block contains two alert functions. The second function, `beforeConfirmBookingLoaded()`, is highlighted in blue in the original image.

Removed JS and CSS that are not used.:

Changes:

Sanitized the input from HTML from and JavaScript input.

Read me file updated.

Removed CSS And JS file as not used as of now.
